COMFORTDELGRO PUMPS US\$4 MILLION INTO TELEOPERATION SOFTWARE COMPANY TO STRENGTHEN AV CAPABILITIES

11 January 2023 - ComfortDelGro Corporation is set to boost its autonomous vehicle (AV)

capabilities by investing US\$4 million (S\$5.4 million) in Ottopia – an Israeli software company based

in Tel Aviv that develops teleoperation software for such vehicles.

The investment, which will be made through the Group's US\$100 million venture capital fund, is the

largest in Ottopia's Series A funding round.

Ottopia's teleoperation technology is unique in its ability to remotely assist, guide and safely control

fleets of autonomous vehicles. Its software, which has been tested and deployed in a variety of

environments, can be integrated into the Group's future AV Operations Centre, making it an

essential tool that would enable the adoption of AV technology in smart urban mobility.

This latest investment is part of the Group's strategy to grow the business especially in the core land

transport areas of smart urban mobility, fleet electrification, automotive engineering technologies,

as well as adjacent disciplines such as clean technology, smart logistics, artificial intelligence,

cybersecurity and robotics.

Said Mr Cheng Siak Kian, MD/Group CEO of ComfortDelGro: "This investment in Ottopia is an

important cornerstone of our future-proofing plans. Having teleoperation capabilities which will

enable us to intervene and operate an AV remotely whenever needed, is critical in our future

operational plans."

Mr Amit Rosenzweig, CEO and Founder of Ottopia said: "We are thrilled to have the support of one

of the world's largest land transport companies as we continue to develop our teleoperation software

platform. This funding will enable us to accelerate the development and roll-out of our teleoperation

software, as well as expand the team to continue pushing the boundaries of autonomy."

Co. Registration No.: 200300002K

In March last year, ComfortDelGro established the S\$30-million AV CoE to focus on research and development of AV-related capabilities over the next five years. Prior to that, the Group had also trialled an autonomous shuttle bus service in real traffic conditions at the National University of Singapore's Kent Ridge campus in 2019 for about slightly more than a year.

The other AV trials, which were carried out by its scheduled bus subsidiary, SBS Transit in 2021, was an on-demand shuttle bus service using autonomous vehicles (AVs) in Jurong Island for three months as part of an initiative under the national Emerging Stronger Taskforce to promote and accelerate sustainable deployment of robotics in Singapore. Prior to this, SBS Transit was also involved in two trials operating AVs with ST Engineering, where its bus captains served as safety drivers. It has also participated in a consortium with ST Engineering Autonomous Solutions, which had submitted a bid for an AV project, in a Call for Collaboration that was announced by the Land Transport Authority and the Economic Development Board.
